Lecture page 1

The cell is the basic unit of life.

Mitochondria produce ATP through cellular respiration.

The nucleus contains the genetic material (DNA).

Ribosomes synthesize proteins from amino acids.

Lecture page 2

The cell is the basic unit of life.

Mitochondria produce ATP through cellular respiration.

The nucleus contains the genetic material (DNA).

Ribosomes synthesize proteins from amino acids.

Lecture page 3

The cell is the basic unit of life.

Mitochondria produce ATP through cellular respiration.

The nucleus contains the genetic material (DNA).

Ribosomes synthesize proteins from amino acids.
